

Position : fixed; Justify Content in grid

CSS

Outline

1. Position: fixed;
2. Justify Content

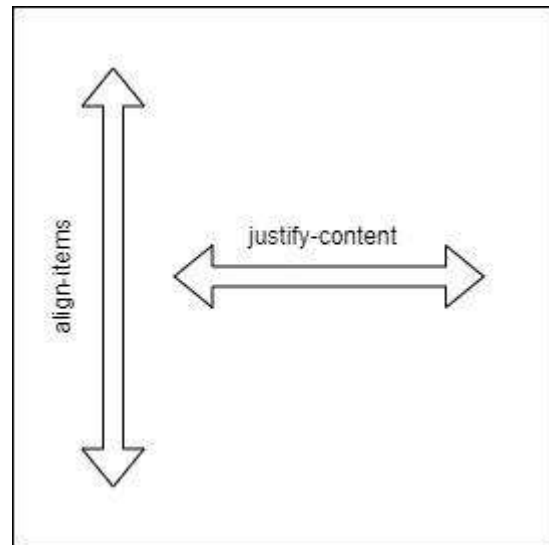

Position: fixed;

Justify-Content

`justify-content` is used to control how the grid items are aligned horizontally within the grid container. It works along the inline (row) axis.

Justify-content (Grid and Flex) vs. align-items

```
1 .item {  
2     display: flex;  
3     justify-content: center; /* row axis */  
4     align-items: center; /* column axis */  
5 }
```

Justify Content Values

- start
- end
- center
- space-between
- space-around
- space-evenly
